1.2. SUPPLIERS DECLARATION OF CONFORMITY

Herewith we declare that all the rums we represent are being produced in conformity to the regulations as laid down in the **EU-council Regulation no. EU 2019/787** of the 17th of April 2019, Annex I, Article 1 of that regulation gives the definition for rum. The description states the way in which rum is being produced, also stipulating the raw material for the product.

1.2.1. SUPPLIERS DECLARATION NO PRESENCE OF GMO

To our best knowledge gene manipulation as outlined in EU-council Regulation no. 1829/2003 is not being used in the agricultural sector from where the raw material for Rum derives: the sugar cane cultivation. Neither do we have any indication that gene manipulated micro organisms are being used in the yeast cultures for the alcoholic fermentation in the course of Rum production.

As specialized wholesale dealers, we are alert on any unnatural manipulation, unconventional production procedures and/or illegal methods where it concerns the production and treatment of Rum. Our supply chain has been examined and questioned on GMO presence for all the products we source.

Should circumstances change to an effect that might result in possible GMO presence in the future we will inform you of relevant changes for the products that you source from us.

1.2.2. QUALITY STATEMENT

E&A Scheer is a unique and specialised company with a long history dedicated to trading alcoholic distillates in bulk. We are specialised first and foremost in sugarcane distillates as Rum and Batavia Arrack.

The company is active in several quite different business-to-business markets world-wide. Our focus is on the import, blending and trade of bulk products only, no bottled goods. E&A Scheer concentrates on the sales of products that are adapted to meet customers' wishes.

For these operations, E&A Scheer has a blending and storage warehouse facility dedicated to sugar cane distillates only, a Commercial department and a Quality Department.

Signed for the above statements,
E&A Scheer BV

1.6. SUMMARY HACCP CONTROL PROCESS PLAN

General information regarding sugarcane distillate:

Sugar Cane Distillate is produced in sugarcane growing climates; in many islands, countries and regions throughout the world. Each region has its own style and tradition. Sugarcane distillate is produced only from sugarcane as a base material.

During FERMENTATION the juice of sugarcane is mixed with water, creating a “wash”, yeast is added, and the residual sugars in the wash are converted to alcohol. The next step is DISTILLATION, during which the alcohol in the wash is concentrated.

Various different styles of sugarcane based distillates are purchased by E&A Scheer for further blending, storage is done in oak casks or in stainless steel tanks.

Because of the high alcohol content of the distillates a microbiological contamination (yeast/moulds/bacteria/viruses) is not very likely in this kind of products.

Because of the high alcohol content the distillates can be stored in ambient conditions without limits. Legally, it is not necessary to declare a shelf life. On customer demand we indicate a 2 year “best before date” on transport labels.

Specific legislation:

- European legislation: EU 2019/787; Spirits
- The general legislation regarding food safety EU 852/2004
- Packaging has to fulfill EU 1935/2004 and linked legislation
